

EDGE of the Woods

Native Plants

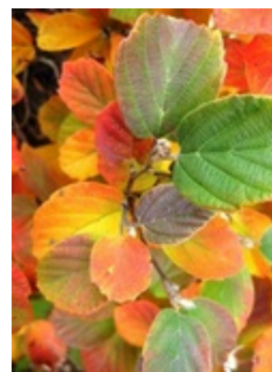

Bring life to your landscape with native plants

It's time for our chat about goldenrod

Goldenrod is a fabulous plant for late season garden color and is an important butterfly nectar plant. Despite its bad rap, Goldenrod does not cause fall allergies. Goldenrod pollen is sticky and is spread by insects. It is not wind-borne and is not wafting in the breeze making you sneeze. The credit for the sniffy nose goes to Ragweed.

So treat yourself to one of the many species of goldenrods. There are goldenrods for sun or shade, tall ones and short ones....no garden is complete without one! Pictured above is stiff goldenrod -- a perfect combo with the mauve dried seed heads of joe pye weed or boneset.

LEFT TO RIGHT

Coneflowers and many other natives create visual interest in the garden long past their 'prime' and continue to provide food and nectar for birds, butterflies and insects.

Joe Pye is a great butterfly attractor.

Dwarf Fothergilla, a small shrub, can't be beat for its fall color.

SEPTEMBER HOURS

Tuesday-Friday 9 am to 5 pm

Nursery tour and introduction to native planting Tuesdays at 10 AM

Saturday 9 am to 4 pm

SUNDAY SEPT 14 ONLY - our last sunday of the season

We will be open 11 to 3.
