

SCROLL DOWN FOR INFORMATION ON OUR CLASS 'GETTING STARTED WITH NATIVES' ON APRIL 30

Clethra 'Hummingbird'

...is a dwarf shrub that is great for moist spots in the garden. It can tolerate clay and shade. It's fragrant summer flowers attract butterflies and pollinators galore. The seed from spent flowers are relished by songbirds and other wildlife.

In autumn the foliage turns a clear bright yellow.

This deer resistant shrub does not, however, attract hummingbirds. It's name is derived from the fact that it was first grown around Hummingbird Lake at Calloway Gardens in Georgia.

We have a limited number of these shrubs for sale this spring. Stop in today!

Native Shrubs for Small Spaces

Many gardeners find that they want shrubs to stay 3 feet tall or lower. There are a few that will fit the bill, but most shrubs are 6 feet or taller.

We often suggest considering a tall growing perennial or warm season grass to fill the space. Consider pulling your planting bed away from the foundation of your home to allow the plants room to attain mature size.

We've made a list of some of the shrubs that stay three feet or lower. When you visit the nursery, each plant will have detailed signage to help you understand the site requirements for the plant and its other features.
